

# IDEAS

We can have remote booking system where customer can reserve a table prior visiting the restaurant.

Customer feedback and rating

Send soft copies of bills via email and SMS

Have a common display screen to show availability of tables

Employee attendance

Allow various payment mode: like cash, UPI or card payments

Table Assignment: check if table is occupied, available or clean

Admin will have monthly/weekly statistics of the customer data, food items ordered and total revenue

By tracing user engagement we introduce offer coupons

Allow human intervention whenever needed may it be of waiter, manager or other staff

Data Analysis for cook to improve food quality.

Feature for manager to update menu details and its details

USER AUTH

Automate the ordering process especially for large scale restaurants where various food items are available and face a crowd of customers on daily basis

All relevant data of customers should be stored in database.
